

The Tippy Tap

- ❖ Every year 3.5 million children die from acute respiratory infections & diarrhea worldwide. Hand washing with soap can save 1.2 million of these children.
- ❖ The tippy tap is a simple device to promote hand washing.

- Hands free – your main water store stays germ free and keeps you healthy
- Saves water – uses 40ml of water while a mug uses 550ml
- Easy – even children can make it
- Economical - uses local and inexpensive materials
- Adaptable – can use wood, bamboo or even a tree to hang the container
- Convenient – much easier than using a mug and bucket
- Efficient – “waste” water from the tap can water plants or recharge ground water
- Useful - place outside latrine, kitchen and in schools
- Wash hands after toilet use and before eating and cooking.

REMEMBER – HAND WASHING WITH SOAP SAVES LIVES!
